

Mission Assignment: Explore how we can adapt to weather changes

Code: COP26S-02_01

Read the different eco-friendly rules below and write a sentence or two about how you think they can be built into your classroom for each one.

Use objects that can be powered by electric energy rather than non-renewable energy.

Make clear how much energy each household item uses.

Use less equipment as a better use of energy.

Share the items that we have, rather than everyone having their own.

Use energy-efficient systems like buses and electric cars to lower costs.

Raise awareness of eco-conscious companies in order to make them more popular.

Identify which of these rules your school does the best and which it does the worse. Rank them in order.

Choosing the rule that your school or classroom does not do very well, write up an action-plan and go into detail of how this can be carried out.

Action plan:

Evaluate your action plan. Is this achievable in the short term? Does it require additional or significant financing?

Are extra materials needed that your class or school does not have? Add your considerations below.
